DEVELOPMENT: ISSUES AND CHALLENGES"**

19TH JANUARY, 2019

**VENUE: MOOT COURT HALL, CHANAKYA NATIONAL
LAW UNIVERSITY (9:30 AM TO 5:30 PM)**

THEME OF THE SEMINAR

The healthy environment determines the quality of life. Clean environment helps in enriching the quality of life and maintain biodiversity. In the past few decades' awareness of the damaging effects of environmental pollution on human beings and their quality of life has increased dramatically. In the hustle-bustle of life, man has almost forgotten nature and has become more and more modernized with the aid of latest scientific and technological developments.

Over exploitation of Earth's natural resources and environment pollution are currently the essential reasons of environmental degradation. However, the development of science & technology accelerated economic growth with high consumption level in developed countries and aspirations of developing countries to match levels of growth are continuing to damage our Planet Earth's environment. India is one of the fastest growing economies of the world and will continue its rapid urbanization and economic development in the coming decades. This is a cause for celebration, but this growth also presents challenges in the form of rising consumption and demand for energy, increasing greenhouse gas emissions, and constraints on critical natural resources such as land, water and biodiversity harboured by them. Since long a course of action plan was resolved in Rio-declaration to improve environmental degradation, to reduce the loss of biodiversity and emission of greenhouse gases and to go ahead towards sustainable development. Still we have not succeeded much in this direction. India needs to find a way to ensure environmental sustainability without compromising its economic and social development. To address growing environmental challenges, a new development paradigm is needed that puts people at the centre of development, regards economic growth as a means and not an end, protects the life opportunities of future generations as well as the present generations and respects the natural systems on which all life depends.
